

Mount Lhotse Expedition - 60 Days

MOUNT LHOTSE

Lhotse not found or type unknown

Mt. Lhotse (8,516 m /27,940 ft), the fourth-tallest peak in the world, is a mountain adjoined with the tallest peak of the world – Mt Everest (8848.86m/29032ft). The climbing line to Lhotse Expedition follows the same line as the climb on Everest, including the aptly named Lhotse face, almost to Everest's Geneva Spur. From here it follows a steep climb through a long couloir all the way to the summit.

The chief way to the summit is the Lhotse Couloir. It is located on the west face, or the Lhotse Face, one of the faces of Lhotse. The couloir is a massive ice gully and presents the most challenging part of the climb for the expedition members. At certain points, its increase is as steep as 80 degrees. It features two rocky areas – the Yellow Band and Geneva Spur. Apart from trying the territory, climbers going over the gully must be wary of episodic snowfall.

EXPEDITION OVERVIEW

Lhotse not found or type unknown

Mt. Lhotse Expedition is an adventurous journey to the 4th-tallest peak of the world (8516 m), which lies just 3km to the south of Everest. Situated at the border of Tibet and Nepal, Mt. Lhotse has three faces: Lhotse (8516 m), Lhotse East (8414 m), and Lhotse Shar (8383 m), and the journey to Lhotse separates from the Everest massif once you reach the South Col only. It is an exhilarating climb that follows the Everest climbing trail up the Lhotse Face before the course steepens to follow an icy gulch to the summit.

Mt. Lhotse was first climbed by Fritz Luchsinger and Ernst Reiss from Switzerland on May 18, 1956. The cavalcade route of the Mt. Lhotse Expedition is the same as the route to Mt. Everest. All expedition teams of Mount Everest and Mount Lhotse ascend just below the South Col on the Lhotse face and set up camps I, II, and III at the same place. Climbing Lhotse is considered much more technical compared to other 8000m peaks, Mt. Manaslu, Mt. Everest, and Mt. Makalu.

After considering the history and previous climbing experience, Satori Adventures noted that the Mt. Lhotse Expedition is too technical compared to the Mt. Manaslu, Mt. Everest, and Mt. Makalu. However, these days, due to the numerous amenities and everything, you can climb this mountain with our experienced mountain experts.

A journey to the Lhotse summit begins by flying from Kathmandu to Lukla, and the trek begins here. Continuing the trek following the trekking route of standard EBC, we reach there. At Everest Base Camp, we prepare for training, do some acclimatization, and begin the upward climb to Camp I, II, and III. It will be the same route as the Everest Expedition till we reach the Yellow Band. After the Yellow Band, the routes diverge with climbers bound for Everest taking a left over the Geneva Spur up to the South Col, while Lhotse climbers take a right further up the Lhotse face. The last part of the

summit leads through a narrow couloir until the Lhotse main peak reaches.

MOUNT LHOTSE EXPEDITION COST FACTS

- Mount Lhotse Climbing Itinerary follows the normal route with proper guidelines and standard patterns with the veteran climbing guides.
- The Itinerary can be modified according to your time, needs, and necessities.
- The cost and Departure dates of the Expedition can be customized as per our valued clients' needs, group size, availability, and services used.
- For modification of the itinerary, the itinerary can be changed after understanding by both the agency and the clients. Any other additional activities could be revised as per the client's request before confirming the trip.
- We offer our clients the best price guaranteed for the Lhotse Expedition.

A BRIEF HISTORY OF THE LHOTSE EXPEDITION

Lhotse 1

Image not found or type unknown

Mount Lhotse (8516M/27,940ft.) was first ascended on May 18th, 1956, when Mr. Fritz Luchsinger and Ernst Reiss, a Swiss group. In 1955, the International Himalayan Expedition team, led by Norman Dyhrenfurth, reached 8100m on Lhotse.

The group included two Austrian climbers, Erwin Schneider and Ernst Senn, and two Swiss, Bruno Spirig and Arthur Spöhel. They went with almost 200 local porters and eight climbing Sherpa guides. After a brief look at the hazardous southern slants of Lhotse Shar, they turned their attention to the Northwest face of Lhotse.

The groups were beaten back by unpredictably strong winds and cold temperatures. When the team noted that the coordinate of 27° 57'45" N 86° 56'03" E was the real summit location, the south col became the usual climbing route. The caravan route of the Mt. Lhotse Expedition is the same as the route to Mt. Everest.

All expedition teams of Mount Everest and Mount Lhotse reach just below the South Col on the Lhotse face and set up camps I, II, and III at the same place. After considering the history and previous climbing experience, Outward Adventure Treks and Expedition noted that the Mt. Lhotse Expedition is too technical compared to Mt. Manaslu, Mt. Everest, and Mt. Makalu.

However, the journey now is much easier these days. Now, the route to Camp IV (The same camps; I, II, III, and IV will be set for Everest and Lhotse) is easier as the Everest Expedition set everything and made the way clear. Leaving the main route to Everest, you will make your way to the summit through the Lhotse Couloir.
